GENERAL DESCRIPTION

This dual-purpose amphitheatre was completed in 2005. As well as being a performance space, the large windowed building at the back of the stage houses a public information exhibition in the form of a large working model which explains the causes of salinity in the local soil.

The entire outdoor performance and audience area is surrounded by running water creating a wonderful environment for staging a concert, outdoor performance or movie. Sightlines are excellent and staging requirements have been well thought out.

There is a 30 amp power supply on stage right and a 20/4 sound loom on stage left linked to a control area on an open air dais in the rear centre of the tiered grass amphitheatre.

There are an abundance of 10 amp supplies both onstage and FOH.

Estimated audience capacity is 500.

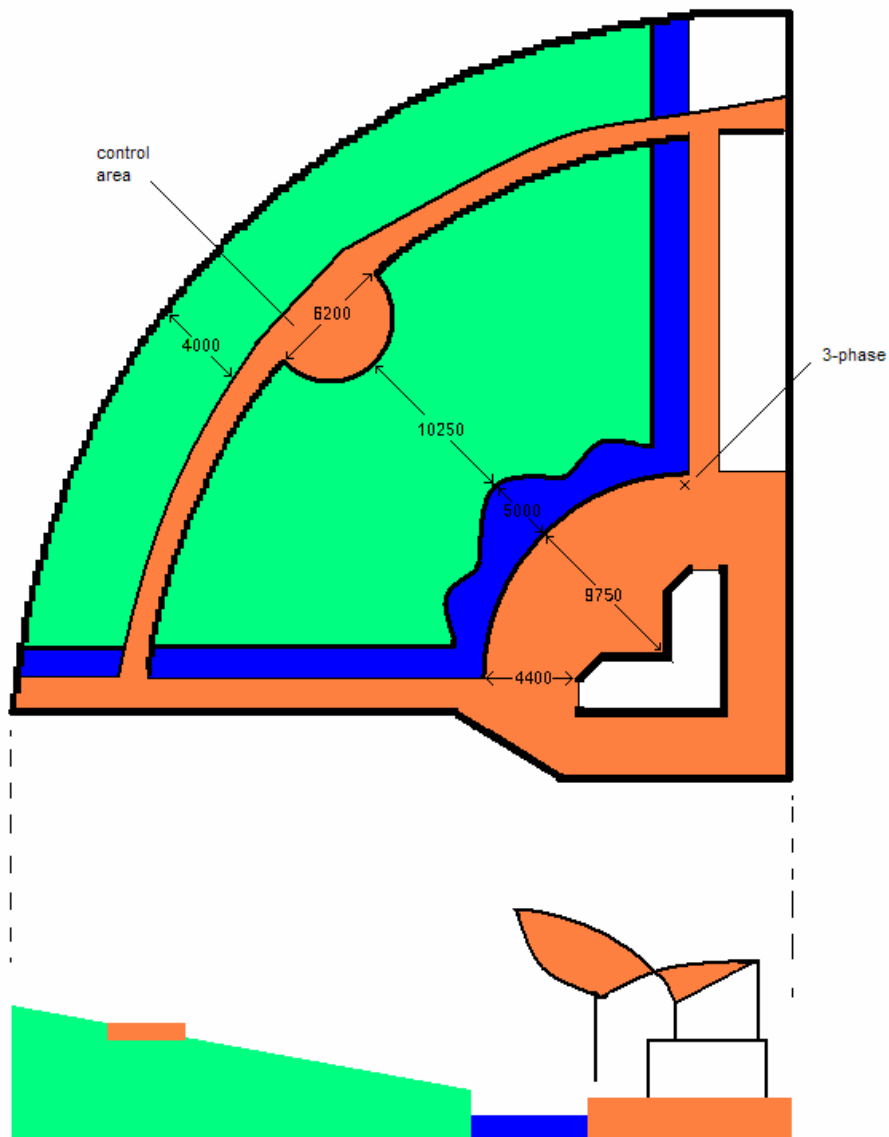

TOURING TIPS

At August 2006, there are no FOH lighting positions, no dressing rooms or backstage toilet facilities, but planning for all of this is in progress. Contact the Shire of Tammin for updated information.

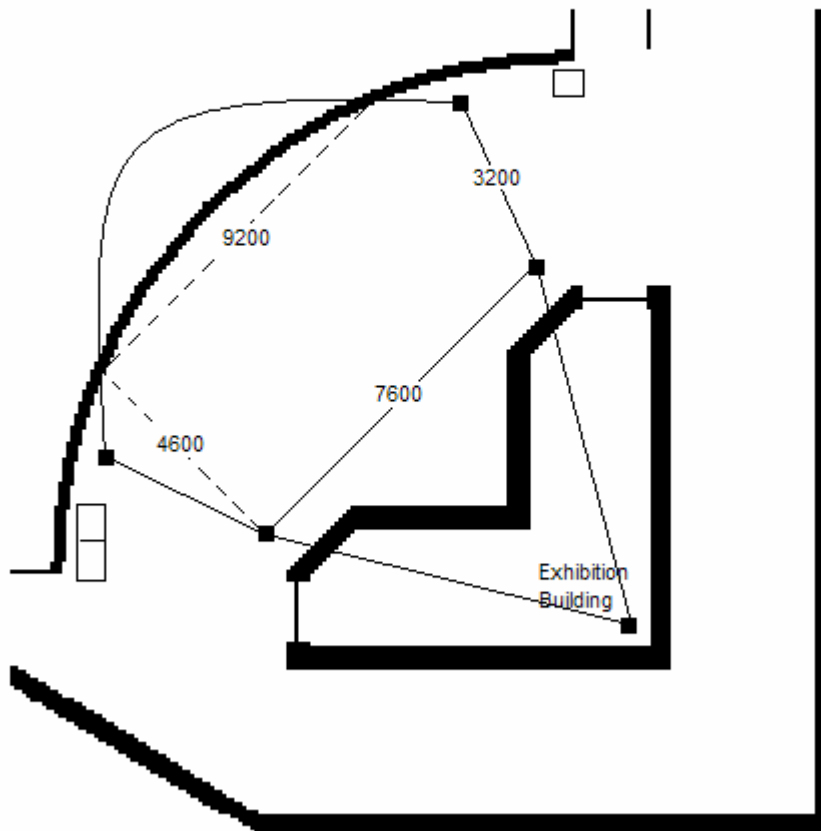

There is a rectangular truss upstage that would be ideal for hanging a backdrop. This would completely disguise the exhibition building, act as a cyclorama, and create a backstage area.

Plan and side section – Kadjininy Kep Amphitheatre

Not to scale

Amphitheatre performance dimensions:
Average = 7000 wide x 5000 deep
Backdrop size 6500 wide x 3400 high

The 7600 long x 3450 high rear trussing bar in front of the building could act as a support for a backdrop. Estimate a backdrop of 6500 x 3400 with scaffold bar in the top and bottom sleeves to allow for chain support and weight at bottom.
